

Summary

Credit Management Association (CMA) is a non-profit association that has served business-to-business companies since 1883.

CMA helps credit, collection and financial decision-makers get the information and support they need to make fast, accurate credit decisions. In addition, CMA assists insolvent companies with workouts or liquidation through cost-effective alternatives to bankruptcy.

Number of Users:

50

Challenge:

To find a malware solution that was highly efficient, easy to manage and affordable.

Solution:

VIPRE provided ultra-reliable security protection, was a breeze to manage and cost half the price of competing products.

VIPRE scores high with Credit Management Association

Previous product was slow and inefficient

When you single-handedly provide IT support for 50 users and 75 machines, as Michael Hansen does, the last thing you need is antivirus software that fails to do its job while boosting your workload exponentially.

"I had come to the end of my rope with our current antivirus," recalls Hansen, the Systems Administrator of Credit Management Association (CMA). "It was a good product when I first started using it years ago, but over time it got bloated and slow, and started to let in more and more infections."

Eventually, the infection problem hit a crisis point when the number and severity of infections caused some usware to stop working and, in a few cases, locked-up machines.

Hansen's computing problems were not only confined to CMA's headquarters in Burbank, Calif., but also impacted CMA's other two offices in Las Vegas and San Leandro, Calif.

"I was running around fixing things for weeks and I wasn't getting any help from our vendor," he notes. "I said to myself 'I just can't do this anymore, I have to find a better product.'"

"VIPRE is a great anti-malware product. It works better than most products and costs half the price of leading brand-name offerings. On top of that, the product has a first-class customer support team behind it. For a product that costs relatively little, VIPRE provides tremendous value."

VIPRE proved its class quickly

After a few days of research, Hansen read a rave review of VIPRE in a computer trade magazine and decided to use the product on a trial basis.

Hansen says VIPRE impressed him within days. "I ran all sorts of tests, and was really blown away by how good the product was at detecting and removing malware," he says. "VIPRE lived up to the marketing hype."

VIPRE is the small-footprint security solution that uses an advanced technology stack to scan for threats quickly while using minimal system resources. Its anti-malware engine features kernel-level, real-time monitoring and protection against both known and unknown threats. By combining high-performance antivirus, anti-spyware, antirootkit, USB scanning, anti-phishing and other security technologies, this tightly-integrated business antivirus solution delivers fast and efficient network security.

VIPRE is Easy to Deploy and Maintain

As Flesher is basically a one-man IT department, he greatly appreciates VIPRE's ease of deployment and administration.

"With my old product, deployment was time-consuming, as I had to install software onto each PC," he recalls. "With VIPRE, I simply install it on the server and push it out to individual PCs."

The product's centralized management console enables Flesher to easily manage VIPRE throughout the plant.

VIPRE's Scanning Leaves Performance Intact

One of the main benefits of VIPRE for Hansen and CMA is that the product's probing, deep scans of PCs never slow down the network or interrupt the work of users.

All the scanning action takes place on the server, with VIPRE scanning large volumes of information quickly and efficiently.

"VIPRE has never impacted the system. As the product works in the background, users are never interrupted from their work," Hansen says. "On top of that, most users never even know their machines are being scanned."

Other Key Benefits of VIPRE

As Hansen is a one-man IT department, he is extremely thankful that VIPRE deploys in minutes and is a breeze to administer.

Once installed, VIPRE is equally easy to manage, thanks to its powerful yet intuitive management console.

Hansen uses the console to keep on top of everything from scans to updates to security audits.

"I've called customer support only twice in the past few years and my experience was amazing both times – fast response by knowledgeable, technical people who were able to help me in minutes."

About VIPRE

VIPRE is the highest-rated, award-winning internet security product for home users and businesses. It is powered by the world's most sophisticated security technologies that protect millions of users from today's top online threats, including ransomware, Zero-days and other malware that easily evades traditional antivirus.

Backed by cutting-edge machine learning, one of the world's largest threat intelligence clouds and real-time behavior monitoring, VIPRE deploys in minutes to deliver unmatched protection without slowing down PCs. All VIPRE customers receive free U.S.-based technical support.
