

VIPRE and Microsoft: Better Together for Powerful, Secure and Compliant Email Archiving

From providing a partner portal to provision and manage your customers to being able to white label our products to leverage features under your own brand, VIPRE is looking for proactive Partners who want to earn great margins and would relish the opportunity to differentiate themselves from other Microsoft partners.

Microsoft Email Archiving Functionality

More and more businesses are moving their email infrastructure to the cloud, leveraging the opportunities and features of Microsoft 365, with email archiving being one.

Microsoft's email archiving functionality, however, includes certain constraints. For example:

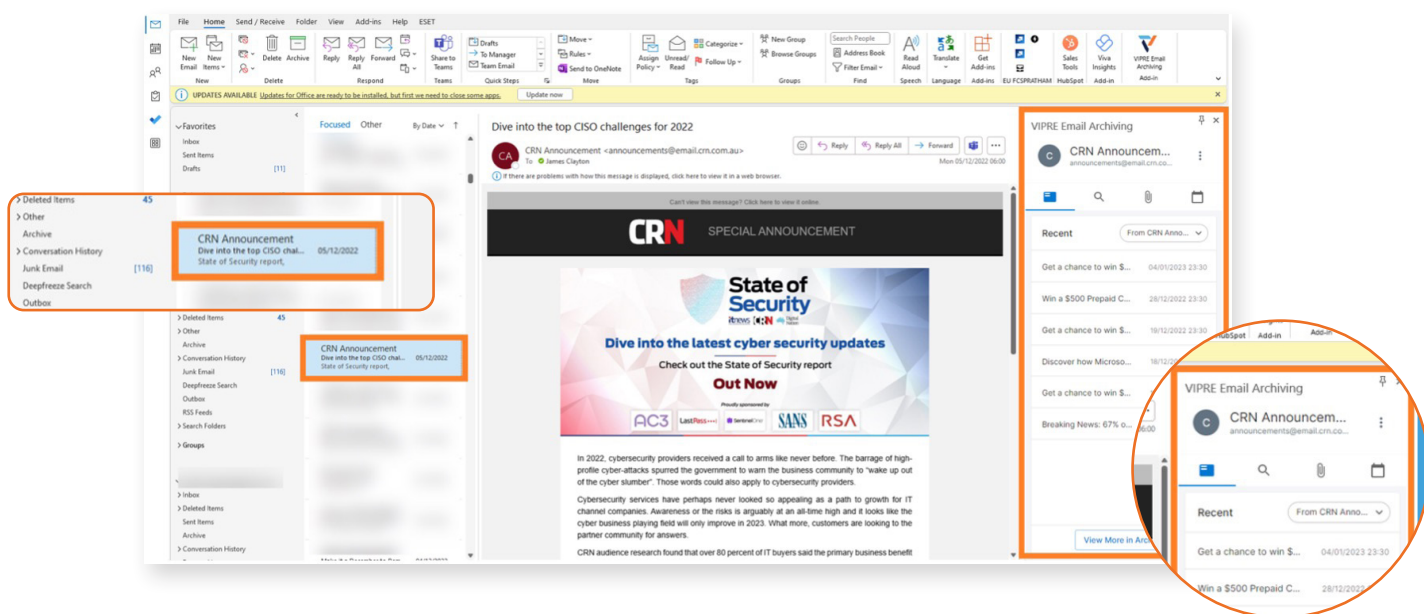

- Searching through thousands of emails is time and resource consuming.
- If you want to retain the emails of a departing executive, you will need to have their account as an active user, which translates into expanded licensing costs.
- Finally, the more data you hold in the cloud, the more you pay monthly.

Your customers deserve a solution that will help them reduce costs while retaining all email data required for compliance without harming productivity.

VIPRE Email Archiving: Built for Speed, Security, and Peace of Mind

VIPRE Email Archiving captures and seamlessly stores every incoming, outgoing or internal email. It is based on highly scalable, geographically dispersed cloud infrastructure. The tool offers highly secure and audited access to prevent stored messages from being maliciously or unwittingly altered.

VIPRE Email Archiving is designed to meet compliance needs, improve productivity, and enable employees to efficiently and quickly search and retrieve information.

Improve Productivity whilst Saving Time and Money

Microsoft 365 users ideally require access to all their historic email. With other solutions this means importing data to the cloud or running two email systems in parallel. VIPRE Email Archiving gives the end-users a better way to preserve all emails and make them available to all their employees via Outlook. VIPRE Email Archiving provides a simple and effective way to manage the move to the cloud without disrupting email access.

VIPRE Email Archiving provides an easy-to-install and use add-on to Outlook that enhances the end-user email experience. Super-fast search capabilities within the familiar email application workflow allow the end-users to display all previous correspondence with a selected sender, which saves the user invaluable time. The user no longer has to wait minutes for searches, which improves productivity.

Fast and Secure Archiving to Ensure Compliance

Where compliance matters, VIPRE Email Archiving’s tamper-evident archive guarantees that your archive is complete and accurate, removing the risk of any accidental or malicious modifications.

VIPRE Email Archiving also provides a sophisticated and fast eDiscovery tool for authorized privileged users. eDiscovery searches are closely monitored and audited and can provide evidential weight for legal and HR issues. Your customers can ensure that all email is retained in a compliant format that satisfies regulatory requirements.

For example, VIPRE Email Archiving helps your customers respond to subject access requests (SAR) and the right to deletion as defined in GDPR and the California Consumer Privacy Act (CCPA).

Customizable retention periods are available to meet your business needs, so you can only keep the data you need. In cases of legal investigations, for example, emails can be set to a Legal Hold state that ignores retention periods and erasure requests. Retention periods can be modified based on role-based privileges by authorized data guardians.

Fast and Effective Solution to Ensure Business Continuity

Email backups are an image of your mailbox at a point in time. Any inbound or outbound communications after that time are not captured. Backups are a great tool to respond to attacks like ransomware, but they are not archiving solutions.

VIPRE Email Archiving ensures uninterrupted business continuity even when your mail is down. As the source of these archived emails is completely independent of the email service, if the service is disrupted, the archive will remain accessible, allowing users to access all historical emails until the email service went offline.

Employees can access their archived emails even from their mobile devices without storing sensitive data on the device.

Take Control of Your Email with a Simple and Secure Solution

VIPRE Email Archiving delivers real business benefits and a great return on investment, making email service a cost-effective business asset.

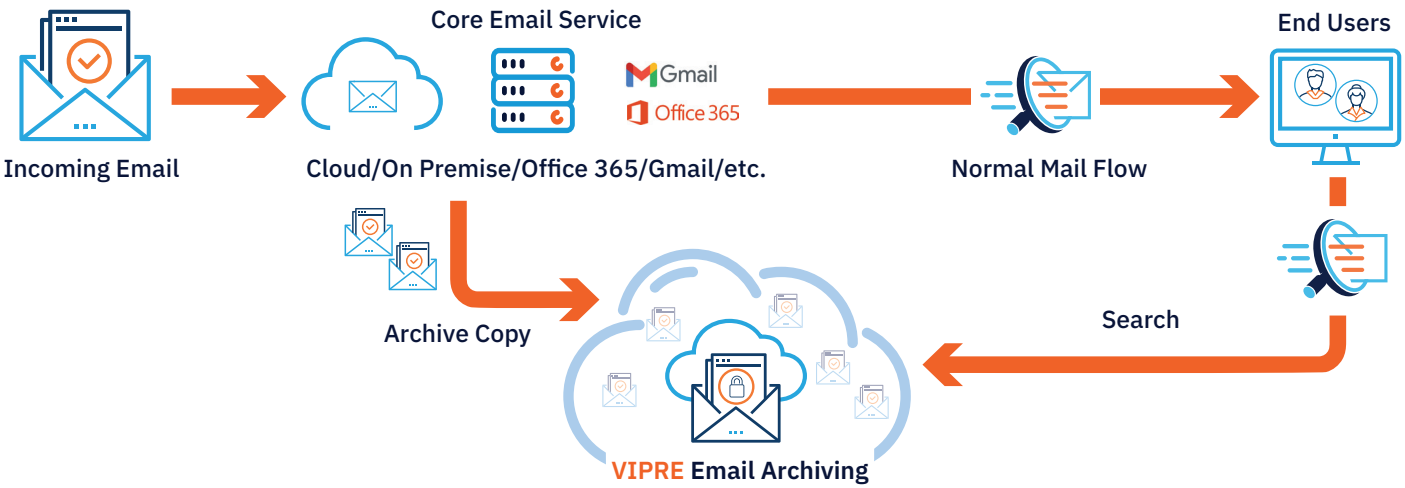

Your customers save money on core email services by capping mailbox sizes and only paying for active users. Inactive employee emails are retained with no user license required, guaranteeing cost-effective access to all legacy emails.

Your customers can reduce email discovery time, cost, and effort for investigation, litigation, and routine Subject Access Requests. With VIPRE Email Archiving, stored emails can be always retrieved quickly.

VIPRE Email Archiving reduces server management and storage costs by outsourcing data storage to a highly scalable cloud service.

VIPRE Email Archiving Benefits

- **Protect business-critical information stored in historic email.**
- **Respond to requests to produce employee email as part of legal action.**
- **Prevent employees from deleting important content.**
- **Make savings on core email services.**
- **Demonstrate compliance when conforming to regulatory requirements.**
- **Business continuity. Maintain email access at all times.**

To realize the scale of all features and benefits offered by VIPRE Email Archiving, get in touch with your VIPRE Security Group sales rep today!

VIPRE and Microsoft: Better Together to Minimize Email Human Error

VIPRE Security group invites you to distinguish yourselves from the thousands of other Microsoft Partners with a unique solution that extends the security of Microsoft 365. Earn great margins and provide your clients with an easy-to-install add-on that enhances their business email security.

Can you make Microsoft 365 even better?

Microsoft 365 is a great enabler for all businesses, but can we improve it? Is there a way to enhance how businesses interact securely with Microsoft products such as Outlook? Standard Microsoft security precautions are great but sometimes insufficient for the business risk environment. Employee mailboxes can also flood with spam due to broken email filters.

VIPRE SafeSend offers a Data Loss Awareness tool to provide additional value to your Microsoft 365 rollouts, allowing you to enhance security, compliance, and employee productivity without impacting the user experience.

VIPRE SafeSend comes with unparalleled support, and our Team of Products Experts, strengthened by our Support Team, regularly achieve 90%+ in our C-SAT scores year on year.

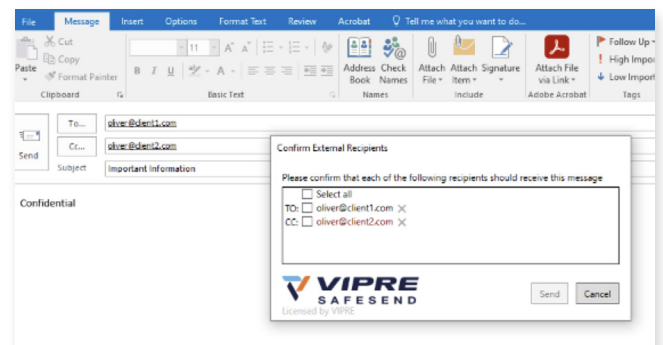

VIPRE SafeSend can help differentiate you from other Microsoft partners and add real value to your offering. You can increase your revenue since the tool can be offered as an add-on to your existing Microsoft 365 bundle rollouts.

Engineered to minimize email human error

VIPRE SafeSend is a Data Loss Awareness tool that offers you the opportunity to extend your business model further into the Data Loss Prevention market or even into Security Awareness Training, the SAT market alone is set to grow to hit \$10 bn annually by 2027. SafeSend very simply helps businesses address human and technology risks.

The Human Factor

The human *element* is involved in 82% of successful data breaches, but human *error* is responsible for 13% of these incidents. VIPRE SafeSend can help your customers reduce the human *error* ratio. These employees are not malevolent nor negligent. They don't want to breach the company information policy and disclose sensitive or proprietary data. Remote working makes the issue even more critical since remote workers can easily be distracted.

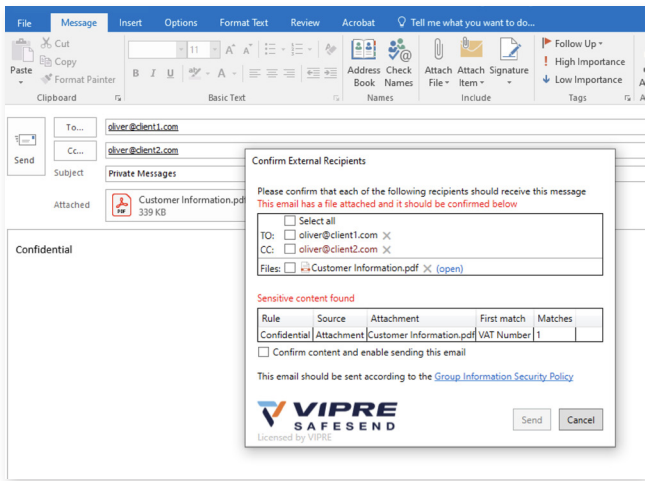

VIPRE SafeSend reduces the business and compliance risk of unwittingly sending sensitive data out in the wild. The employee is prompted to validate that the recipient's address is the intended one. The solution also ensures that employees attach the correct document and confirm that any sensitive information included can be sent.

VIPRE SafeSend is all about raising awareness through continuous training reinforcement. The tool forces a behavioral change by making employees re-evaluate the emails they send internally or externally.

Minimize Technology Complexity

Traditional Data Loss Prevention (DLP) solutions stop emails after the employee has hit the send button. Going through all these blocked outgoing emails requires time and people, which understaffed security teams seldom have.

The VIPRE SafeSend add-on to Outlook warns the employee whenever they try to send something externally, minimizing complexity and burden while enhancing compliance posture. GDPR, HIPAA, SOX, and many other regulations require measures to prevent accidental, unauthorized disclosure of sensitive data, like medical records or financial transactions.

Businesses can leverage DLP scanning features to prevent sensitive emails and information from being sent to the wrong person.

Use VIPRE SafeSend to confirm external recipients and attachments in Microsoft Outlook

VIPRE SafeSend scans outgoing emails and attachments to ensure sensitive data does not leave your network. Employees can detect domain anomalies, attachments, and private data in real-time.

Customizable and cost-effective security

The power of VIPRE SafeSend lies in its customization features. Settings can be customized per company, department, role, etc. There’s great flexibility in how you can configure the add-on to behave.

The solution can be customized within hours to meet the needs of businesses of all sizes, from large-scale organizations, like Fortune 500 companies, to the SME community.

VIPRE SafeSend is three times less expensive than its competitors without facing the maturity issues other AI, and ML-based products deal with. AI systems are not infallible; yet the SafeSend add-on will create a reliable pop up according to the pre-configured settings.

SafeSend reduces tickets raised by employees once they have made a mistake and need IT to investigate or remediate in an already stretched team. Users are notified to correct actions before hitting the send button, reducing time spent investigating preventable incidents.

The number of emails sent and received per day is set to rise from

290 billion in 2019 to almost 350 billion in 2025

Added bonus: reinforce security awareness training

For Partners offering or looking to offer security awareness training, VIPRE SafeSend bundled with VIPRE Security Awareness Training (SAT) could be just the complimentary product set you are looking for to help reinforce the messages given in training to increase security across the board.

Works seamlessly with Microsoft Office 365

VIPRE SafeSend integrates seamlessly with Outlook within a few minutes to begin protecting immediately. Settings can be locked or changed only by authorized personnel. What is more, your customers can test it for free for 14 days with no obligation to buy.

Reasons to buy

Don’t wait until the next mistake impacts your brand reputation or causes you to lose a major contract. For only a small fraction of your clients’ budget, they can set aside the email mis-delivery problem – licensing is from around \$2 monthly per active user and can drop down significantly for large-scale organizations.

Did you know VIPRE SafeSend has an industry-high retention rate of 98%? Our customers feel secure knowing human errors via email are minimized and even non-existent in a world where compliance is king. New standards are being launched all of the time to legislate around cybersecurity, emphasizing user protection.

While this is yet another product added to the cybersecurity arsenal, albeit at a low cost, high retention may be the difference you need to make to compete against other Microsoft Partners.

“Once we have put SafeSend in place, we saw a 60% reduction in data breaches in one year alone.”

“The ROI possibilities of this tool seem endless; it could have been protection against a breach, adherence to legislations, it could have been sending data to a competitor accidentally, or sharing PII or financial data in a trading blackout. The possibilities are endless, and so too are the risks.”

To talk to one of our Channel Specialists, get a demo or simply take the FREE 14-day trial get in touch with your VIPRE Security Group rep today.

VIPRE and Microsoft: Better Together to Empower Your People

Why diversify into Security Awareness Training

If you are not currently selling Security Awareness Training (SAT) as part of your value proposition, then you are leaving money on the table. SAT is a compulsory part of cyber security infrastructure and is an integral requirement of many compliance standards or contracts.

The Cybersecurity Awareness Training market is projected to grow from USD 1,854.9 million in 2022 to USD 12,140.0 million by 2027 and is expected to grow at a CAGR of 45.6% from 2022 to 2027¹.

As a Microsoft Partner, you will have many competitors who potentially have higher sales, better brand recognition, or simply more money to spend on marketing. A way to differentiate without spending money but simply earning additional revenues could lie in your ability to offer Security Awareness Training.

The people, process, and technology equation within cyber security creates a portfolio of protection from threats. Offering a solution to cover each element of the pyramid provides you with a robust solution for all opportunities in the cyber security marketplace.

Empower your customers to address global cyber risks

Cybersecurity is one of the top priorities for organizations. In the Global Risks Report 2023², the World Economic Forum places Cybersecurity Failure in the highest risk quadrant in its global risks landscape. The rapidly shifting cybersecurity landscape creates unique challenges for security professionals and users to stay informed and take appropriate action. Organizations must not only ensure that their security technologies and processes protect against these threats and risks, but it is crucial that they train their employees as well.

With Inspired eLearning, from VIPRE Security Group, your customers can empower their employees by providing tailored, engaging, and motivating security awareness content. Building a bulletproof human firewall that turns one of their most valuable assets into their first line of defense.

Our solutions are a great match for all business needs. With over 295 cybersecurity and training awards, our content stands out to various leading industry organizations. With a 97% Customer Satisfaction Rate, we demonstrate our commitment to providing innovative eLearning solutions and unparalleled customer service daily.

Human is the most vulnerable cyber domain

The human factor is the most important pillar in cyber security. However, the people domain is regularly quoted as being the weakest of the three cyber domains³ – the others being technology and processes.

The impact of the human element on cybersecurity cannot be understated; 82% of data breaches “involve the human element”⁴.

Employees can act as the first line of cyber defense, but the lack of security awareness is the top barrier for organizations in establishing effective defenses⁵. Security culture plays a crucial role in how employees consider and engage with cybersecurity. For example, even though 55% of IT leaders rely on employees to alert them to cybersecurity incidents, 89% of incidents lead to repercussions for the employees involved. And only 54% of employees are empowered by the organization's security culture⁶.

The lack of awareness often results in a negative, fear-based security culture, which alienates employees from engaging with cybersecurity leading to a vicious cycle. Fear fatigue, defined as “demotivation to follow recommended protective behaviors,” was reported by 80% of organizations and can often lead to careless employee behavior⁷.

Reasons to invest in security awareness training

Your customers have many good reasons to invest in Security Awareness Training:

- **Create a safer environment** for all employees by building a positive, reinforcing, inclusive, and engaging security culture. Training outcomes can also benefit their loved ones at home and help improve overall digital well-being.
- **Foster business growth:** security awareness training is increasingly becoming a procurement prerequisite for winning big contracts.
- **Get cyber insurance coverage;** security awareness training is mandatory for purchasing cyber insurance coverage⁸.
- **Make technological defenses against cyber threats** more robust. Supplement security technologies and processes with skilled and motivated staff to reduce the time to detect and respond to incidents.

It’s not enough just to have security measures in place; you need your employees to be fully aware of them and know what to do if they spot something suspicious.

- **Reduce business risk** and prevent costly data breaches and phishing attacks.
- **Simplify compliance** with a patchwork of security and privacy regulations.
- **Build confidence with your customers** that their data are treated respectfully and lawfully.
- **Increase the size of your cyber security team** without additional headcount. Cyber security is everyone’s job; when all your employees are engaged with cyber security, they become your “human firewall” to prevent and detect potential threats against your systems and data.

Gamified, engaging, bitesize security awareness content

Inspired eLearning end-user security awareness training platform transforms the power of enterprise-grade software into simplified, targeted, and easily deployable training solutions.

We can help your customers reduce human-related security incidents by educating their employees to recognize today’s cyber-attacks.

Powered by automation capabilities, Inspired eLearning has built 15+ years of enterprise cyber security expertise into our course catalog. Our standards-based (SCORM) content can be deployed or easily integrated into any LMS platform, even if your customer uses a third-party LMS solution.

Learning theory has demonstrated that gamified training sustains motivation and increases engagement rate. Gamification reinforces content learners already know from having completed fundamental courses. Through our advanced phishing simulation engine and gamification, you can simulate email, text message, voice, and USB phishing. A game-based course combines realistic simulated emails with gameplay functionality.

Every part of our courses is optimized for retention. With cinematic intros, smartly placed interactivities, and a conversational tone, we ensure learners are engaged when the course starts. The relatable work environments and scenarios allow learners to view themselves in the training so they can apply their knowledge to their everyday lives.

Inspired eLearning offers all types of training content – from traditional foundations-building courses to bite-size microlearning. With the compact nature of microlearning, courses can be completed in just a few minutes.

What our customers say

“The content is relevant and is presented in a way to capture and retain the learner’s interest – which is hard to do with compliance training!”

HR, Talent Manager

“Not only is the content of our courses spot on, but the incredible support we continue to receive from the implementation team is really comforting!”

VP, HR

“I love the cybersecurity training path that includes pre and post-training evaluation, short and relevant training modules and mock phishing exercises. Because our company has now transitioned to a remote workforce, reliable web-based training has become even more important, Inspired eLearning really reduces the burden of employee training for their clients.”

Senior Council

VIPRE and Microsoft®: Better Together to Protect Your Clients' Inboxes

VIPRE Security group invites you to distinguish yourselves from the thousands of other Microsoft Partners with a unique solution that extends the security of Microsoft 365. Earn great margins and provide your clients with a comprehensive platform that enhances their business email security.

Can you make Microsoft 365 even better?

Microsoft 365 is a great enabler for all businesses, but can we improve it? Is there a way to enhance how businesses interact securely with Microsoft products such as Outlook? Standard Microsoft security precautions are great but sometimes insufficient for the business risk environment.

Your customers are navigating a myriad of email security and compliance challenges. These challenges include the persistent threat of cyberattacks by criminals who test the limits of existing security measures and the rising complexities in data protection regulations, resulting in long-lasting effects and financial burdens. Addressing these multifaceted challenges is crucial for your customer's business continuity and growth.

VIPRE Security Group's Email Security Advanced Threat Protection (ATP) is a powerful solution specifically designed to safeguard partner customers from an extensive array of email security threats. The solution offers next-level email security protection to combat phishing scams, spoofing, and security breaches, all with the convenience of cloud-based email security management. Advanced Threat Protection is bundled with features that can help you overcome email security challenges and establish a comprehensive strategy to defend your customers inboxes. The features include Link Isolation, Link Click Analysis with Remote Browser Isolation, Attachment Sandboxing, and more importantly, Remediation.

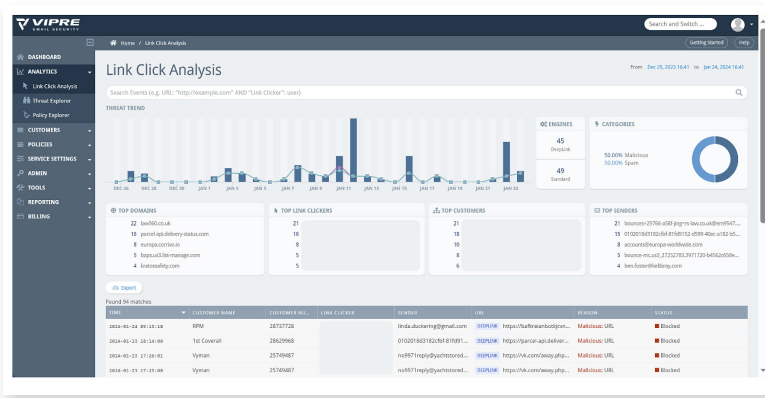

Link Isolation

Link Isolation is an effective solution that safeguards your customers by rendering malicious URLs in emails and their associated web pages harmless. This technology uses advanced sandboxing techniques while also educating your customers' employees about the risks of clicking on erroneous links in emails.

Link Click Analysis

Your security team can analyze links that your customers' end-users have clicked through an easy-to-use, interactive dashboard. The analytics dashboard rolls up all the Link Isolation data from all your customers. You can examine how many suspicious links are being clicked, what threats they are subjected to, and who the most vulnerable users are.

Managing your customers' email security posture is made easy. The Top Customers table provides an overview of all your customers, allowing you to identify patterns such as repeat offenders, common links and senders. You can also analyze specific links in more detail to understand why an email was blocked. By providing this information to your customers, you become an invaluable resource.

Threat Explorer

Any attachments extracted from an original email can be analysed via integration with VIPRE's Threat Explorer service. The dashboard rolls up all the detection information on emails as they are parsed through the platform. This includes spam, viruses and the output of the dynamic behavioural analysis. Again, it highlights prevalent attack vectors and the customers being targeted. You can instantly drill down to the specific threat within a customer's profile to investigate further using the integrated tooling of Remote Browser Isolation.

Remote Browser Isolation (RBI)

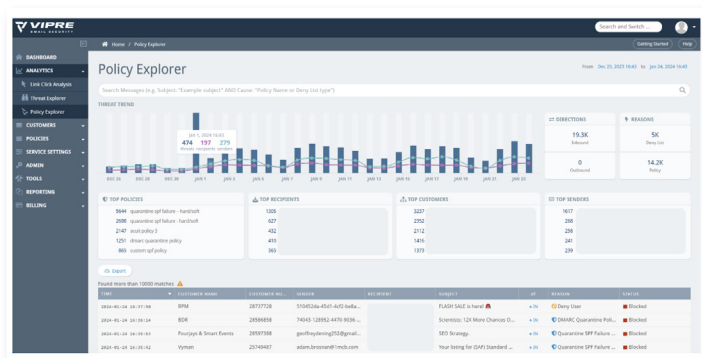

RBI uses cloud-based containers to render website content in virtual browsers. This helps your administrators investigate any suspicious URLs in your customers' mailboxes in an isolated sandbox. RBI also generates detailed logs of all events, which can be used for incident investigation and remediation in the future.

Email Remediation

Email Remediation enables your security administrators to remove malicious emails from your customers' mailboxes even after they have been delivered. This is achieved through a simple integration with Microsoft 365.

Advanced Policies

The flexibility of Advanced Policies allows for customization of ATP to meet organizational needs with a proactive approach. These policies augment your email security, preventing known scenarios, and can be tailored to your organization's business policies. The analytics dashboard rolls up all the Advanced Policy information from all your customers.

Reasons to buy.

By partnering with VIPRE, you can be rest assured that you're not only safeguarding your customers, but also securing a recurring revenue stream. Our cutting-edge email security solutions are designed to protect organization's from a wide range of threats, ensuring that your customers can conduct their operations without the spectre of email security breaches.

Partnering with VIPRE is a strategic decision that empowers you to streamline security solutions, explore new revenue opportunities, and achieve financial profitability. With exceptional support, consistently scoring a 96% customer satisfaction rate, a steadfast commitment to security, and the ability to protect your customers effectively, VIPRE stands as a dependable partner in your journey toward a more secure and prosperous future.

Advanced Threat Protection may be the differentiator you need to compete against other Microsoft Partners. If you would like to learn more about partnering with us, speak to one of our consultants, or enjoy a **FREE 14-day trial** and get started today.

Why **VIPRE Security Group** and **Microsoft** are 'Better Together'

Why VIPRE Security Group and Microsoft are ‘Better Together’ for Increased Partner Margins

From providing a partner portal to provision and manage your customers to being able to white label our products to leverage features under your own brand, VIPRE Security Group is looking for proactive partners who want to earn great margins and would relish the opportunity to differentiate themselves from other Microsoft partners. We have a combination of solutions that no other vendor can offer, and we’re poised to help you stand out in the crowd.

Why Partner with VIPRE

Data breach costs increase annually; the IBM Cost of Data Breaches report indicates a 12.7% increase between 2020 and 2022. And more than 80% of global organizations face at least one breach per year. Now more than ever, it is necessary to have a layered security approach, including email, endpoint, and web security, backed up by security awareness training, to improve security posture, protect data and systems, and secure business investments and innovation. VIPRE enables technology partners to deliver top-rated security products backed by world-class technical support.

With over twenty-five years of industry expertise, VIPRE is one of the world’s most prominent vendors delivering protection against today’s most aggressive online threats. With one trusted vendor supplying you with award-winning, top-rated email and endpoint security, security awareness training, and human-led data protection tools, you can be confident that we value you, your customers, and your business.

The VIPRE Partner Community (VPC) is a partner program for technology and consulting organizations. We partner with companies that embody the best the industry has to offer. In return, we are committed to helping companies build, market, and sell their offerings by providing valuable business, technical, and marketing support.

Be Different

- Expand your security offerings beyond the standard solutions offered by other vendors.
- Advanced email security solutions enable partners to differentiate themselves.
- Offer clients any combination of the most-awarded security awareness, compliance, and HR training courses in the market.

Be Supported

- Regionally-based, dedicated sales and client success manager per partner and an aligned named account group for co-selling.
- Dedicated sales team to provide quotes, demos, and sales enablement materials.
- Premium, global technical support.
- Partner portal to provision and manage your customers.
- 24/7 portal access to training tools and co-brandable marketing resources.
- Migration and onboarding support from our dedicated teams.
- Intuitive administrative simplicity for multi-tenant management.

Be Safe

- Proven Channel Program of more than 4,000 Partners worldwide.
- VIPRE Security Group earned a 5-Star Rating in the 2023 CRN® Partner Program Guide
- Proven technology – millions of users worldwide rely on VIPRE to keep their organizations secure.
- Strong SLAs protect you and your customers.
- Services available to white label – leverage our features under your brand.
- Deal registration to protect the business you have worked hard to build.

Be Profitable

- Receive discounted reseller rates and set your pricing structure. The more you sell, the greater your margins.
- Protected renewal margins.
- High-demand products.
- Huge growth potential with our scalable services.
- Recurring revenues.

The Microsoft Market Opportunity

Microsoft 365 is a great enabler for all businesses. Your customers can further enhance productivity and security by relying on a trusted partner. The people, process, and technology equation within cybersecurity creates a portfolio of protection from threats. A solution covering each element of the pyramid gives you a robust solution in the cybersecurity marketplace

People: Security Awareness Training

Organizations must not only ensure that their security technologies and processes protect against threats and risks, but it is crucial that they train their employees as well.

With Inspired eLearning Powered by VIPRE solutions you can build a more secure workforce by providing tailored, engaging, and motivating security awareness content. Build a bulletproof human firewall that turns one of your most vulnerable assets into a fortified first line of defense.

With gamified, engaging, adaptive, and bitesize security awareness content, you can launch easily deployable training solutions to reduce human-related security incidents. Ensuring that employees recognize and prevent cyber-attacks is the key to the “people” aspect of cybersecurity.

Process: VIPRE Email Archiving

Microsoft’s email archiving functionality is time and resource intensive and archiving emails of departing employees can cause licensing fees to skyrocket. You deserve a solution that will help reduce costs while retaining all email data required for compliance without harming productivity.

VIPRE Email Archiving captures and seamlessly stores every incoming or outgoing message. It is based on highly scalable, redundant, geographically dispersed cloud infrastructure. The tool offers highly secure and audited access to prevent stored messages from being maliciously or unwittingly altered.

VIPRE Email Archiving is designed to meet compliance needs, improve productivity, and enable employees to efficiently and quickly search and retrieve information. VIPRE Email Archiving ensures uninterrupted business continuity even when your email is down. Employees can even access archived emails from their mobile devices without storing sensitive data.

Technology: VIPRE Email Security

Standard Microsoft security precautions are great but sometimes insufficient for the business risk environment.

Businesses require a powerful email security solution to safeguard them from an extensive array of threats and prevent potential business risks. VIPRE’s email Advanced Threat Protection (ATP) is a comprehensive cloud-based email security management solution for advanced protection against phishing, spoofing, and security breaches.

Advanced Threat Protection includes features like Link Isolation, Link Click Analysis with Remote Browser Isolation, Attachment Sandboxing, and post-delivery Remediation to tackle email security challenges and develop a comprehensive defense strategy for your employees’ email inboxes.

VIPRE SafeSend extends the security of Microsoft email by adding an extra level of interaction to ensure that misaddressed emails and those with attachments or sensitive data are not sent to unintended recipients.

This Outlook-based add-in reduces the business and compliance risk of unwittingly sending sensitive data to unintended recipients. VIPRE SafeSend is all about raising awareness through continuous training reinforcement with in-app pop-up messages that make senders think twice before sending messages containing sensitive data like personally identifiable information (PII). The tool forces a behavioural change by making employees re-evaluate the emails they send both internally and externally.

Free trial now available on

Let's Get in Touch

With award winning, customizable, and cost-effective security solutions, our products can help your customers enhance the security of their Microsoft 365 ecosystem whilst earning you amazing margins. Individually, each of these solutions empower you to expand your product offerings and when packaged together as part of your Microsoft 365 proposals, they provide you and your clients with the most comprehensive, layered security program in the industry. **To learn more, get in touch with your VIPRE channel sales representative.**
