VIPRE SAFESEND

SafeSend Cloud

Enterprise-Grade Outbound Email Protection, Deployed in Minutes

Your team is meticulous — and human. In fast-paced environments, "oops" moments like a misaddressed email or a wrong attachment are inevitable. You have relied on SafeSend to protect these moments for years; now, we are thrilled to introduce the next evolution: SafeSend Cloud.

SafeSend Cloud provides the same trusted outbound email protection you depend on, reimagined with a modern, SaaS based approach. Built specifically for organizations seeking operational simplicity, it acts as a proactive "speed bump" at the moment of send, stopping accidental data leaks before they happen.

By integrating seamlessly with Microsoft 365, it serves as a proactive checkpoint during the sending process, thwarting unintentional data exposure before it exits the organization.

Challenges

The Problem: Human Error Drives Data Loss

Most email security tools focus on blocking threats. However, many breaches don't start with attackers; they start with mistakes.

- A misaddressed email
- The wrong attachment
- A 'reply-all' sent too quickly

These common, everyday errors can lead to compliance violations, damage to reputation, and expensive investigations. SafeSend Cloud stops them at the moment of sending, before they have a chance to become incidents.

Solution

Built for the Cloud, Designed for Simplicity

Live in Minutes
No infrastructure or complex rollout. Deploy directly into Microsoft 365 and start protecting outbound emails the same day.

Scales Automatically
From a few users to thousands, with no reconfiguration required. SafeSend Cloud grows with your business without adding operational overhead.

Cloud-Certified Compliance Posture
Built for regulated environments. Supports organizations that need strong data protection without managing infrastructure internally.

Native to Microsoft 365
Works inside the tools your teams already use. No disruption to workflows. No change in user behavior required.

Uptime SLA
Always available. Always protecting. Enterprise-grade reliability without internal management.

Predictable OpEx Model
No capital investment and no hidden infrastructure costs. Simple, subscription-based pricing that scales with your business.

Solutions

SafeSend Cloud includes the complete SafeSend protection capability

- Confirm external recipients before sending emails, meeting invites, and tasks.
- Prevent autocomplete and reply-all errors.
- Verify attachments before emails are sent.
- Scan email content and attachments in real time for sensitive data.
- Build your own DLP rules based on keywords, patterns, PII, and financial data.
- Define response actions like Inform, Confirm, Type Confirm, or Deny.
- Use unified report dashboards and auditing capabilities.
- Set up policy definitions based on organizations, departments, or user groups.

Easy Deployment, Centralized Management, and Reduce Operational Costs

Core Capabilities Across All Deployments:

- Control and monitor all client deployments using one unified platform.
- Have total control and visibility of all environments with a single point of access.

Per-Client Policy Control

- Create policies for each client depending on their specific threat landscape, industry-specific requirements, and business needs.
- Stay flexible while maintaining security policy consistency.

Unified Reporting

- See the statistics, trends, and risks of all deployed environments in one interface.
- Spot potential problems, support compliance efforts, and give security teams clearer visibility into email risk.

Fast Client Deployment

- Deploy new clients within hours, not days.
- Get up and running without adding customer-managed infrastructure.

Solutions

SafeSend Cloud + Microsoft Security

SafeSend Cloud works alongside Microsoft security tools, not against them.

Microsoft tools:

- Enforce policies
- Block based on rules
- React after risk is detected

SafeSend Cloud:

- Intervenes before the email is sent
- Prevents human error in real time
- Adds a behavioral safety layer

Together, they deliver complete protection: policy enforcement plus human error prevention — closing the gap that traditional tools leave behind.

Cloud Is the Right Choice When...

SafeSend Cloud is ideal for organizations that need fast, scalable protection without operational complexity:

- Microsoft 365 environments
- Limited in-house IT resources
- Fast time to value is critical
- Distributed or remote workforce
- Preference for predictable OpEx costs
- Shared or managed compliance posture

If your organization is already operating in the cloud, SafeSend Cloud aligns naturally with your existing architecture and operating model.

The Outcome

Fewer incidents, less investigation, more confident users.

SafeSend Cloud gives your team a simple checkpoint before sending, turning risky moments into safer decisions and reducing the burden on IT and security teams.
